

INTRODUCING

# MedaCube™

Invented to help people feel better.

*MedaCube is the only clinically proven solution to medication non-adherence.*

## Relieve caregiver worry

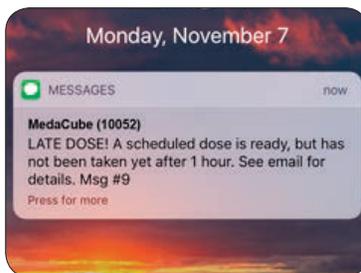

Medication can be a big part of our loved ones' lives. It can be complicated. And if they lose track of what pills have been taken and when, there can be very big consequences — in health, in independence, in happiness.

**MedaCube will help.** A 'smart' dose machine the size of a toaster, MedaCube sits on the kitchen counter and prepares the right dose, at the right time, every time. And it will keep you in the loop so you know how things are going.

### Convenience features for caregivers:

**Bulk loading.** Just pour pill bottles into the locked bins — up to 16 different medications for up to 90 days or more (depending on pill size). *No more pre-sorting!*

**Text alerts.** MedaCube will send you text messages if any doses are late or missed, when it is time to refill a medication, and if any tampering occurs.

**Reports.** Caregivers & doctors can view reports on the HIPAA-compliant secure website: pill inventory, pill dispensing times, adherence, & when As-Needed medications are requested.

"It's taken that whole conversation and all of that whole worry about 'Is she taking the right thing' out of the equation — we don't even really talk about it any more. Four times a day (because that's when she takes her meds) if I don't get an alert, I know she's OK. To me, the MedaCube is checking on her for me four times a day."

*Jennifer H, granddaughter and caregiver*

INTRODUCING

# MedaCube™

Invented to help people feel better.

## So easy to use!

▲ Watch the video about Kathleen — great-grandmother and MedaCube user — at [www.medacube.com](http://www.medacube.com).

MedaCube prepares your medication doses for you in three easy steps:

1

When MedaCube tells you, touch the screen.

2

Tip the dispense drawer and pour the pills into your hand.

3

Close the drawer and take your pills. That's it!

### IT'S NOT JUST FOR PILLS!

In addition to preparing your daily pill doses, the MedaCube features a reminder system that can be used for non-pill medications such as insulin and inhalers. You can also use it for as-needed medications like aspirin.

"I feel safe that I took the right dose. That's the main part that I like. It's very good to stay in your own home and be independent ... sometimes the kids call me and say 'Grandma, did you do this? or did you do that?' and I tell them 'I did everything I was supposed to do'."

*Kathleen O., great-grandmother*
